

GLADSTONE LAKE

FISHERIES STATUS SUMMARY

LOCATION:

Gladstone Lake is located in Henderson County one mile southwest of the Village of Gladstone. Access to the lake is also off of U.S. Route 34, one mile to the north.

DESCRIPTION :

This 32 acre small sanpirt or watertable impoundment is owned and managed by the Illinois Department of Natural Resources and is situated within a 87.5 acre site that in addition to fishing, offers primitive camping.

The lake has a maximum depth of 25 feet with the bottom contour very irregular due to a series of underwater ridges. The 1.5 miles of shoreline is accessible to bank fishing. A boat ramp is provided along the southeast shoreline.

Formation of Gladstone Lake started in 1910 and continued until 1947 as sand was dredged from the site to be used by steam locomotives as rail traction. In 1961, the site was purchased by the Illinois Department of Conservation and developed as a state park, known today as the Henderson County Conservation Area.

MANAGEMENT ACTIVITIES:

The lake and its sport fishery are evaluated annually by an electrofishing survey which direct fish stockings and fishing regulations.

The historic flood of 2008 on the Mississippi River inundated Gladstone Lake and contaminated it with undesirable, non-sportfish. Within a 4 year period the introduced fish had resulted in a very poor quality sport fishery. In 2012, the lake was rehabilitated with a fish toxicant to remove the undesirable fish and then restocked in 2012 and 2013.

Largemouth Bass:

In 2018, a fall D.C. electrofishing survey was used to evaluate the fish population. The largemouth bass population was evaluated by 53 bass from electrofishing.

The largemouth bass population appears to be defined by a high percentage of fish from 3 to 14 inches in length with just average Relative weights. The bass population appears to be stunted with a high density of fish competing for space and food. A very large year class was produced in the spring of 2014, 2015,2017 and in 2018.

The current bass regulation will remain in place for 2019. Anglers can and hopefully will harvest some of the bass under 12 inches in length.

Bluegill:

The bluegill population was sampled by 19 stock size fish in the fall electrofishing survey. The current bluegill population is rated as poor with the larger fish up to 7.0 inches in length. This population is of high density and in below average body condition with a Wr average of 81 for stock size fish.

Redear sunfish:

The redear sunfish population was sampled by 12 fish in the fall electrofishing survey. The current redear population is rated as poor with the larger fish up to 9.0 inches in length. This population is of moderate density and in average body condition with a Wr average of 94 for stock size fish.

The current bluegill and redear sunfish harvest limit is 10 fish daily per angler.

Black Crappie:

In 2018, the black crappie population was sampled by one fish at 3.2 inches in the fall electrofishing survey. A low density black crappie population is present at this time. No harvest or length limit is necessary at this time for the crappie population.

Channel Catfish:

The channel catfish population was sampled by 4 fish from 17 to 19.7 inches in the fall electrofishing survey. Jake Wolf hatchery stocked 710 fish at 6.4 inches in 2018. An annual stocking of non-vulnerable channel catfish is scheduled for the future.

Muskie:

No muskie were sampled in the fall electrofishing survey. 2 female muskie at 33 inches in length were stocked into Gladstone Lake in the spring of 2016 by IDNR Fisheries and 10 fish at 12.5 inches in 2018. A low density muskie population will be the goal for Gladstone Lake. A total density of less than 10 fish per year will be stocked over the next five years. In 2017 the muskie harvest regulation was established at a 48 inch minimum and 1 fish per day harvest limit for Gladstone Lake.

Fishing Regulations:

All Fish - 2 pole and line fishing only.

Muskie:

- 48 inch minimum and 1 fish per day harvest limit.

Largemouth or Smallmouth Bass:

-1 fish greater than or equal to 15 inches and/or 2 fish less than 12 inches. 3 fish daily harvest limit.

Bluegill or Redear Sunfish:

- 10 fish daily harvest limit.

Channel or Blue Catfish:

- 6 Fish daily harvest limit.

Recreational Use Restrictions:

-The use of gasoline motors to propel watercraft is not permitted, electric motors only.

-Swimming is not permitted.
